Exclusive Technology

3Dtech

La tecnologia 3D Tech consente di applicare differenti materie ceramiche, anche a spessore, in perfetta corrispondenza con la grafica sottostante, realizzata in digitale ad

altissima definizione. Un processo produttivo rivoluzionario, che combina la matericità con l'estetica del prodotto, fino ad ottenere superfici dallo straordinario valore sensoriale.

The new 3D Tech technology allows thick layers of various ceramic materials to be applied in perfect alignment with the underlying graphic designs, which are created

digitally with extremely high definition. This revolutionary production process combines material and aesthetic effects to create surfaces with extraordinary sensorial appeal.

SOFT 3D

La tecnologia SOFT 3D consente di realizzare lastre dalla finitura extra morbida arricchite da effetti di bassorilievo che ne esaltano la naturalezza. La differente densità delle materie

utilizzate in superficie, nelle zone selezionate, ricrea chimicamente le profondità, che si sovrappongono in maniera esatta alla grafica digitale ad alta risoluzione.

The SOFT 3D technology allows to create slabs with an extra smooth finish, enriched with bas-relief effects that enhance the naturalness of the surface. The different density of the

raw materials applied in the selected areas, chemically recreates the depths that exactly match the high-resolution digital graphic.

Technical Information

FULLBODY3D

Grazie ai più evoluti sistemi di miscelazione e pressatura degli impasti ceramici, FLAVIKER è in grado di ricreare la complessa struttura dei materiali lapidei. L'esclusiva tecnologia FULLBODY 3D permette di ottenere ciò che la natura ha creato nei millenni, riproducendo

l'estetica delle pietre sia in superficie che nel corpo della lastra. La continuità tra massa, superficie e bordo delle lastre è garantita anche dopo le operazioni di taglio, foratura e rifinitura necessarie a ottenere il prodotto finito.

Flaviker uses the most advanced ceramic body mixing and pressing systems to recreate the complex structure of stone. Emulating the processes that occur in nature over millions of years, the unique FULLBODY 3D technology

reproduces the aesthetics of stone both on the surface and within the body of the slab. This ensures seamless continuity between the body, the surface and the edge of the slabs even after cutting, drilling and finishing operations.

P. tech

La tecnologia P.TECH migliora la resistenza allo scivolamento, pur mantenendo una piacevole sensazione al tatto. P.TECH è il risultato di un innovativo processo produttivo che coniuga la selezione delle materie prime con le fasi di pressatura, cottura e lavorazione a fine linea.

I prodotti P.TECH, R10 ed R11, pur raggiungendo i più elevati coefficienti di attrito, si puliscono facilmente, per questo possono essere utilizzati nei progetti wellness e outdoor, anche in aree pubbliche o commerciali.

The unique P.TECH technology improves slip resistance while maintaining a pleasant tactile sensation. P.TECH is the result of an innovative production process that combines a meticulous selection of raw materials with the pressing, firing and end-of-line processing stages.

Despite their high coefficient of friction, R10 and R11 P.TECH products are easy to clean, making them ideal not only for use on indoor floors but also in wellness and outdoor spaces in public or commercial areas.

No-Slip Surface

La versatilità delle superfici Flaviker si afferma anche dove si elevano i parametri di anti-scivolosità. Non solo per le aree outdoor, ma anche nelle zone wellness, per bordi piscina sia interni che esterni, la gamma offre numerose soluzioni in grado di rispondere ai requisiti tecnici imposti dalle norme vigenti. Gli articoli in finitura

antiscivolo riproducono tutti gli effetti materici più rappresentativi dei prodotti "indoor", per creare, dove richiesto, una perfetta continuità con gli spazi coperti, sia a spessore tradizionale che a spessore maggiorato, tenendo conto di ogni esigenza e dei diversi sistemi di posa.

The versatility of Flaviker surfaces is also evident in their anti-slip properties. Suitable for outdoor spaces and for interior and exterior wellness areas and swimming pools, the range includes numerous solutions that meet the latest technical and performance standards. The non-slip surfaces are available with the

same material effects as the most widely used indoor products in both conventional and extra-large thicknesses. This creates a sense of continuity between interior and exterior spaces while catering for all needs and installation systems.

Informazioni tecniche Technical details

Posa tradizionale

Traditional installation

La posa tradizionale è ideale per la realizzazione di pavimentazioni carrabili. Traditional installation is ideal for floorings that will be driven over by vehicles.

Posa a secco su sabbia

Dry installation on sand

La posa su sabbia permette di creare percorsi e camminamenti per spiagge e stabilimenti balneari. Installing on top of sand is ideal for creating paths and walkways on beaches and beach bars.

Posa a secco su ghiaia

Dry installation on gravel

La posa su ghiaia permette il perfetto drenaggio delle acque piovane. Installing on gravel enables perfect drainage of rainwater.

Posa sopraelevata da esterno

Outdoor raised laying system

Il sistema di pavimentazione sopraelevata prevede l'utilizzo di supporti portanti di tipo autolivellante, regolabili oppure fissi che si adattano con semplicità e sicurezza ad ogni tipo di pavimento sottostante. Il sistema permette la realizzazione di piani di posa con altezze variabili, da terra, comprese fra 25 e 270 mm. L'indipendenza della pavimentazione dai supporti garantisce l'assorbimento di eventuali movimenti strutturali. Il sistema sopraelevato non necessita di massetto in cemento e consente una diminuzione del peso sulla struttura portante. Le fughe aperte tra una piastrella ed un'altra consentono un facile deflusso dell'acqua piovana evitando tutti i rischi di accumulo o di ristagno. La presenza dell'intercapedine fra il piano di calpestio e il piano di appoggio favorisce l'aerazione e l'isolamento termico. Questa soluzione permette inoltre il passaggio di impianti e tubazioni nell'intercapedine, e la facile ispezione degli stessi una volta installata la pavimentazione.

The raised floor system foresees the use of self-levelling, adjustable or fixed load bearing supports that easily adapt to the floor below in total safety. The system is suitable to create laying designs with variable heights from the ground, which range between 25 and 270 mm. The independence of the flooring from the supports guarantees the absorption of any structural movements. The raised system does not require a cement screed and reduces the load on the bearing structure. The open joints between the tiles allow rainwater to easily drain off, avoiding any risk of water accumulation or stagnation. The gap between the tread surface and the support surface favours ventilation and heat insulation. This solution allows for the installation of systems and piping in the gap, which can be easily inspected even once the floor has been installed.

Posa a secco su erba

Dry installation on grass

La posa diretta su erba permette di creare percorsi e camminamenti integrandosi perfettamente nell'ambiente. Installing directly on top of grass enables the creation of paths and walkways that blend in perfectly with the surroundings.

Per informazioni sull'utilizzo dei supporti per pavimentazione sopraelevata, consultare il catalogo X20. To see more about the use of self-levelling for raised floor consult the X20 catalog.

SOLUZIONI PER SUPERFICI CARRABILI URBANE E RESIDENZIALI
DRIVE-OVER SURFACES SOLUTIONS FOR URBAN AND RESIDENTIAL SPACES

I prodotti X30, grazie allo spessore maggiorato di 30 mm, hanno le caratteristiche tecniche necessarie per la posa di tutte le situazioni carrabili in esterno, dagli spazi residenziali privati fino ai centri urbani. In caso di traffico leggero, come nei viali, nei cortili e nei parcheggi delle abitazioni, la pavimentazione può essere installata senza incollaggio. In questo caso il materiale si stende su una base di aggregati lapidei di varia granulometria compattati, avendo cura di utilizzare i comuni distanziatori in materiale plastico. Nelle zone sottoposte a traffico elevato, come percorsi stradali e piazze cittadine, è invece necessario effettuare la posa su massetto cementizio con malta d'allettamento, seguendo procedimenti analoghi a quelli utilizzati per la posa dei materiali naturali.

With their extra-large 30 mm thickness, X30 slabs have the necessary technical characteristics for use in any outdoor vehicular application, from private residential areas to urban centres. For light traffic situations such as driveways, courtyards and residential parking spaces, the slabs can be installed without adhesive. In this case, they should be laid on a base of compacted stone aggregates of various sizes and positioned using ordinary plastic spacers. In heavy traffic areas such as roads and city squares, the slabs should be laid on a cement screed with bedding mortar following similar procedures to those used for the installation of natural materials.

Imballi packaging

NUOVI SISTEMI DI IMBALLO

L'innovazione del progetto lastre si esprime anche attraverso la parte logistica del progetto. ABK Group rivoluziona il sistema di imballaggio delle lastre ed è a oggi l'unica azienda che ha portato il sistema a cavalletto impilabile alla dimensione di cm 75x284x147,5 (lastre 120x280) 75x168x109 (lastre 80x160) e 75x26x200 (lastre 26x200).

- Questi i principali vantaggi offerti:
- essendo impilabile permette di ottimizzare gli spazi all'interno dei magazzini.*
 - la profondità di 75 cm consente di sfruttare a pieno il volume di carico dei container (3 pallets ne occupano perfettamente la larghezza).
 - Il posizionamento verticale del prodotto garantisce una maggiore protezione delle lastre durante le fasi di trasporto.
 - facilita le operazioni sul cantiere in quanto le lastre si trovano già posizionate in verticale, il materiale è facilmente ispezionabile e removibile per l'installazione.
 - le dimensioni complessive del cavalletto consentono maggiori spazi di manovra all'interno dei locali di posa rispetto alle casse tradizionali e agevolano il sollevamento del materiale mediante mezzi meccanici (gru-montacarichi).
 - è caratterizzato da un sistema di regettatura che consente di liberare anche 1 solo collo alla volta, senza compromettere la stabilità del materiale che rimane sul pallet, evitando così il rischio di rotture. Le lastre dovranno essere liberate rispettando la sequenza opposta rispetto a quella con cui sono state confezionate, quindi iniziando dall'ultimo collo regettato.

NEW PACKAGING SYSTEMS

Innovation in the slab's range is also reflected in the project's logistics. ABK Group has revolutionised the packaging of ceramic slabs and is the only company to have expanded the stacking rack pallet system to the 75x284x147,5 (slabs 120x280) 75x168x109 (80x160 slabs) and 75x26x200 (slabs 26x200) cm size.

- This has the following advantages:
- stacking optimises the use of space in warehouses.*
 - the 75 cm depth enables full use of container load space (3 pallets fit perfectly side by side). The vertical positioning of the product better protects the slabs during shipping.
 - it facilitates work on site, since the slabs are already positioned vertically, making the material easy to inspect and remove for installation.
 - the overall size of the rack pallet provides greater space for manoeuvring in the installation area in comparison with conventional crates, and also makes it easier to lift the slabs mechanically (with a crane or lift).
 - the rack pallet system employs strapping which allows the user to remove a single package at a time without affecting the stability of the other packages on the pallet, thus minimising the risk of breakage. The slabs must be released from the packaging by reversing the packaging sequence, i.e. starting with the last package to have been strapped on.

FLAVIKER garantisce una superficie utile pari a 1635x3230 mm, la fatturazione invece è calcolata sulla base del formato 1600x3200 mm Su richiesta, le lastre in 6 e 20 mm di FLAVIKER possono essere rinforzate strutturalmente con una stuoia in fibra di vetro applicata sul retro con apposito collante, come avviene già in automatico per le lastre in 12mm.

L'applicazione della stuoia prevede una maggiorazione di € 10,00 al mq sul prezzo netto della lastra.

Su richiesta, le lastre possono essere rettificare nella dimensione di 1596,5x3195 mm con una maggiorazione sul prezzo.

FLAVIKER guarantees a useful surface area of 1635x3230 mm whereas billing is calculated on the basis of a 1600x3200 mm size.

On request, the 6 and 20 mm slabs from FLAVIKER can be reinforced with fiberglass matting applied to the rear surface using a special adhesive, as already happens automatically for 12 mm slabs. The fiberglass matting application involves a 10,00 € per sqm increase on the slab's net price. On request, slabs can be reticified size 1596,5x3195 mm with a price increase.
